DESCRIPTION OF WORK

Upon arrival, client had stated that they were having issues with floor drain backing up during heavy rain, as well as whenever using any facilities. Client had greeted me at the door and shown me to the side entrance where there are a flight of stairs down to basement. Client had guided me to the basement where we were able to duplicate the issue just by running stationary tub. Made estimate for \$93 drain clearing special + EDF for sewer line and client had signed off and agreed to the terms of service. Ordered main line through stack clean out in the basement with 300 machine with a 3 inch double cutter blade and pulled nothing back. Tested the line thoroughly by running water from stationary tub, and also filling up stationary tub and letting it discharge at the same time as client flushing toilet multiple times and the line did not back up again. During testing process noticed that there was water leaking from stationary tub and going towards water heater in which the bottom is rusted due to no pan being underneath of water heater. For this reason made a couple of estimates for new stationary tub. If client is to want quote for water heater, then service plumber will need to be scheduled. There is a \$98 service charge for the service plumber to come out and do any quoting. Client will have one year one trip return warranty on main line clearing
